APHISIT DANCHAODANG Software Engineer

Phone +66 623469060 **GitHub** github.com/aphsx **Email** aphisitdanc.work@gmail.com Bangkok, Thailand

SUMMARY

Software Engineer with 2+ years of experience building production systems while completing a CS degree. Delivered Go microservices for an insurance claims platform and led development of 5+ live web platforms. Skilled in PostgreSQL/MSSQL database design and turning business rules into reliable backend services.

EDUCATION

Bangkok University **2023 - Present (Expected May 2027)**

Bachelor of Science in Computer Science GPA 3.51 / 4.00

TECHNICAL SKILLS

Languages	Go, TypeScript, JavaScript, SQL, Python, Dart, C++
Backend & APIs	Go (Gin, Fiber), Node.js, Bun, Express, ElysiaJS, RESTful APIs, Microservices
Frontend & Mobile	React, Next.js, Flutter, Tailwind CSS, Responsive HTML5/CSS3
Databases & Storage	PostgreSQL, MSSQL, MySQL, Redis, SQLite, Cloudflare R2
DevOps & Practices	Docker, Git, Postman, Agile/Scrum, Full SDLC

EXPERIENCE

Fullstack Developer (Contract) | August Ten Digital Development Co., Ltd. **Apr 2026 - Aug 2026**

TPA Insurance - Claims Core System

- Translated complex insurance business rules into backend validations at the API layer (e.g., date overlaps, duplicate conditions, plan effective-period constraints).
- Built Fullstack features across a microservices architecture, integrating Next.js frontends with Go services via RESTful APIs.
- Built claim APIs on a split MSSQL setup, reading member data from a read-only replica and persisting claim records to the primary database.
- Resolved 300+ UAT defects across frontend and backend (UI rendering, form validation, API response mismatches), preparing the system for production release.

Software Developer (Research Assistant) | CoSI Bangkok University **Aug 2024 - Apr 2026**

- Led end-to-end development of 5+ production web platforms across ERP, e-learning, and tourism domains using Go and Next.js, owning system architecture, database design, and deployment.
- Built a production management ERP for a government organization, translating complex workflows into normalized relational schemas.
- Developed a university-wide e-learning platform used by 200+ faculty members across 13 schools to manage courses and learning content.
- Standardized a reusable Go + Next.js template (auth, structure, deployment), reducing new project bootstrapping time from 6 months to 3 months across 5+ platforms.

PROJECTS

Simple Bank - Core Banking & Transfer Engine | Go (Gin), PostgreSQL, Docker

- Implemented money transfers as ACID transactions with double-entry ledger records in PostgreSQL.
- Prevented deadlocks in concurrent bidirectional transfers by enforcing consistent row-lock ordering.
- Wrote concurrent integration tests (testify, goroutines) to verify balance consistency under load.
- Built RESTful APIs with PASETO authentication, containerized with Docker.

ML Customer Prediction | In collaboration with 1Moby Co., Ltd.

- Built churn and CLV prediction models with LightGBM and XGBoost (>0.85 ROC-AUC, 82% F1, SHAP explainability), served via FastAPI to a Customer 360 dashboard for the business team.

BillGang Collaborative Expense Splitting App | Mobile App

- Developed a cross-platform expense-sharing app in Flutter that lets groups split bills by item.
- Built AI receipt parsing with local vision LLMs via Ollama and prompt-engineered extraction of line items and totals, achieving 85% line-item accuracy across 50 real-world receipts.
- Added a multimodal model fallback chain for reliability, with zero API cost and fully local processing.
