APHISIT DANCHAODANG Software Engineer

Phone +66 623469060 **GitHub** github/aphsx **Email** aphisitdanc.work@gmail.com Bangkok Thailand

SUMMARY

Software Engineer with 2+ years of hands-on production experience delivering end-to-end, full-stack web platforms and enterprise microservices. Proficient across the full software development lifecycle , architecting decoupled Go and Node.js backend systems, designing normalized relational databases, and building responsive Next.js interfaces. Proven ability to translate complex domain logic into resilient, production-ready releases.

EDUCATION

Bangkok University **2023 - Present (Expected May 2027)**
Bachelor of Science in Computer Science GPA 3.51 / 4.00

TECHNICAL SKILLS

Languages	Go (Golang), TypeScript, JavaScript, SQL, Python, Dart, Java, C++
Backend & APIs	Go (Gin / Fiber), Node.js (ElysiaJS / Express), RESTful APIs, Microservices
Frontend & Mobile	React, Next.js, Flutter, Tailwind CSS, Responsive HTML5/CSS3
Databases & Storage	PostgreSQL, Microsoft SQL Server (MSSQL), MySQL, Redis, SQLite, R2
DevOps & Practices	Docker, Git, Postman, Automated Concurrency Testing, Agile/Scrum, Full SDLC

EXPERIENCE

Fullstack Developer (Contract) | August Ten Digital Development Co., Ltd. **Apr 2026 - Aug 2026**
TPA Insurance - Claims Core System

- Engineered full-stack features within a decoupled microservices architecture, integrating responsive Next.js frontends with standalone Go services via RESTful APIs.
- Implemented Primary/Replica database read-write splitting in Go to optimize query
- Translated complex insurance business rules into resilient backend validations (e.g., date overlaps, duplicate conditions, and plan effective-period constraints) at the API layer.
- Isolated and resolved critical UI/API defects during UAT using ticket-driven diagnostics to ensure stable production releases.

Research Assistant | Center of Specialty Innovation (CoSI) **2024 - 2026**

- Led end-to-end development of 5+ production web platforms across ERP, e-learning, and tourism domains, owning system architecture, relational database modeling, and deployment
- Engineered robust relational data models and normalized SQL schemas, translating varied business requirements into high-performance backend services.

PROJECTS

Simple Bank - Core Banking & Transfer Engine | Go (Gin), PostgreSQL, Docker

- Developed an ACID-compliant core banking engine featuring double-entry ledger accounting and zero-deadlock bidirectional transfers via deterministic row-locking order.
- Ensured 100% data integrity under concurrent stress through automated Goroutine test suites; implemented secure REST APIs with PASETO authentication and Docker containerization.

ML AI Customer Prediction | 1Moby Co., Ltd.

- Developed an end-to-end ML workflow and Customer 360 dashboard to automate data ingestion and model predictions, providing the business team with a centralized dashboard for customer data and predictions.

BillGang Collaborative Expense Splitting App | Mobile App

- Developed an expense-sharing mobile app featuring OCR and AI receipt scanning, backed by Bun (ElysiaJS), Neon DB, and Cloudflare R2 object storage.
